DAVI LUIS SANTOS COSTA

Full Stack Software Engineer | .NET (C#, ASP.NET Core) back end & React/TypeScript | Legacy modernisation, device-to-cloud integration | Azure, CI/CD

costasantos.daviluis@gmail.com | +55 21 98917-6500 | LinkedIn | GitHub | Portfolio

Open to remote roles, full-time or contract · Based in Brazil, overlapping US and European hours

PROFESSIONAL SUMMARY

Mid-level Full Stack Software Engineer focused on .NET back ends, with nearly 4 years building and running systems in production. I modernise legacy systems without stopping operations (Delphi/Firebird to .NET) and own services end to end, with DDD, Clean Architecture, automated tests gating every release and CI/CD. Device-to-cloud: I connect LPR cameras, access readers, networks and ESP32 firmware to .NET services that run today at 20+ residential sites.

TECHNICAL SKILLS

Back-end: C#, .NET 8/10, ASP.NET Core, REST APIs, EF Core, MediatR/CQRS, SignalR, Windows Services, Node.js, Python, Delphi

Front-end: TypeScript, React, Next.js, Vite, TanStack Query, Blazor, React Native, TailwindCSS, PWA

Architecture & Testing: DDD, Clean Architecture, hexagonal, microservices, xUnit, integration, contract and architecture tests, Kanban (GitHub Projects)

Cloud & DevOps: Azure (App Service, OIDC/managed identity, RBAC), Oracle Cloud, Cloudflare, Docker, GitHub Actions (self-hosted runner), NuGet, Linux/systemd, blue-green with automatic rollback

Data & AI: SQL (PostgreSQL, Firebird, SQLite; EF Core code-first), Redis · AI-assisted development (Claude Code), MCP servers, Playwright

Hardware & Networking: LPR cameras (Alphadigi, Hikvision, Motorola, Intelbras), Control iD, TCP/IP, RTSP, RS485, ESP32 (C++), Mikrotik

PROFESSIONAL EXPERIENCE

Segmix Tecnologia — Software Engineer (Mid-Level) Jan 2025 – Present

Junior (Jul 2023 – Jan 2025) · Intern (Feb 2023 – Jun 2023) — Rio de Janeiro, Brazil

- Main author of the **vehicle LPR server**, an on-premise .NET service integrating cameras from four vendors and Control iD UHF readers with a legacy Firebird system, **running at 20+ residential sites**, with fail-closed access decisions and camera self-healing.
- Shipped **103 releases in 10 months** of it, backed by **2,000+ automated tests**, test-enforced architecture rules and a zero-warning release gate, and built its unattended auto-update: on-disk blue-green, SHA-256 checks and health-checked automatic rollback.
- Leading the domain design of the **new concierge platform** replacing a 20-year-old Delphi/Firebird system (identity, property structure, credentials, visits and vehicles); v1.0 (.NET + Next.js PWA), built with the team, has been in production since Sep 2026.
- Designed how the platform's **three services** fit together: a versioned contract in NuGet packages, tag-driven releases on GitHub Actions and a single installer that deploys them pre-wired.
- Leading the migration of the **personal access server** from Delphi and WPF to C# and ASP.NET Core, and set up AI-assisted development (Claude Code) with test-enforced rules.
- Earlier: distributed access control (Minimal APIs on Azure + React Native), a real-time condominium app (SignalR), a WhatsApp chatbot with face recognition, ESP32 controllers.

MLS Wireless — Help Desk Support Intern Sep 2022 – Feb 2023

- First-level technical support (internet, email, domains and VoIP), documenting recurring issues for the team.

OPEN SOURCE & PERSONAL PROJECTS

Sirene — Real-time alerting SaaS, live with a waiting list

Python (asyncio), Playwright, Telegram Bot API, Oracle Cloud, Cloudflare, GitHub Actions

- 24/7 monitor that detects slot openings on a government portal within ~30 s, with double confirmation, re-login, backoff and a dead man's switch (Healthchecks.io), alerting via Telegram.
- Playwright automation deployed with safety locks and automatic rollback; landing page, public status page and subscriber bot live.

ControlId.Net — Open-source .NET client for Control iD access-control devices

C#, .NET 8/10, netstandard2.0, xUnit, GitHub Actions, NuGet

- Library published on NuGet (with dependency-injection and ASP.NET Core packages), tested on .NET 8, .NET 10 and .NET Framework 4.8 and validated on a real iDFace device, with batch operations, paged reads and per-device concurrency limits.

Arco — Habit-tracking app running on Azure

.NET 10, React 19, Vite, PWA, Azure App Service, GitHub Actions, MCP

- CI/CD pipeline built from scratch (lint, build and tests on every PR, health-check smoke test), Azure sign-in via OIDC with a managed identity and no secrets in the repo, plus an MCP server with 18 tools so AI assistants can operate the app.

EDUCATION, CERTIFICATION & LANGUAGES

Microsoft Certified: Azure Fundamentals (AZ-900) — Microsoft (2026)

Postgraduate Diploma in Software Engineering — Uniamérica (2025 – 2026)

Bachelor of Computer Science — Uniamérica (2023 – expected 2026)

Associate Degree in Systems Analysis & Development — UNISUAM (2022 – 2024)

Languages: Portuguese (native) · English (intermediate: fluent technical reading and writing, conversational speaking)
